HANSUNG manufacturer of generators, has been its most to offer reliable quality and achieve customer satisfaction. As a leader in the field of generating equipment, we manufacture a variety of best quality of generator, including generator for general use, agricultural and marine use, on the basis of advanced technology. in addition to high quality, we offer best price and delivery.

We are always ready to comply with your request for service. We have our own service team that will solve your problem as soon as we can.

Product Introduction

Characteristic of Generators

- Easy maintenance

: The exciting brushless type was employed in order to permit easy maintenance. The generator is designed for easy maintenance. The generator is designed for easy connection to output terminal or access to components within it.

- Standardization of parts

: Many parts that are used in a generator have been standardized to eliminate inconvenience in replacement or repair.

- Insulation Class "H"

: Insulators of class H are used in Hansung's all generators. Therefore, Hansung's generators guarantee the best insulation performance under environment. All parts for rotor has been treated with epoxy and impregnated in a dropping manner.

- S23 silicon steel plate used

: S23 silicon steel plate was used as a materials of the main core, a key part of generator, so that iron loss rate is minimized and durability is maximized.

- A.V.R

: The A.V.R is designed for voltage to be regulated within $\pm 5\%$. It is possible to use it even when the exciting resistance is low.
